VALUE IN HEALTH CARE

# DRUG COST ANALYSIS

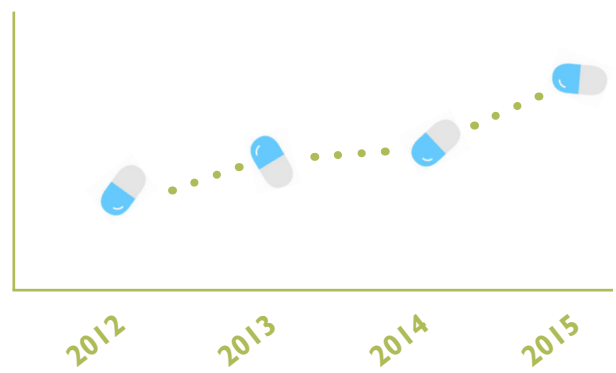

Colorado All Payer Claims Database

Curious about how **drug prices might be impacting patients?** Wondering **how the price of certain drugs have changed over time** for health plans and patients?

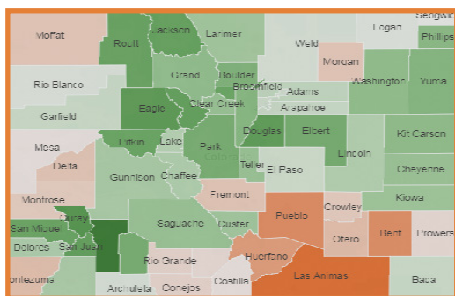

The Colorado All Payer Claims Database (CO APCD) **DRUG COST ANALYSIS** can help you understand how much is being spent on drugs in Colorado and how prices vary across different geographies and payers.

“Having the data we were interested in available in a dashboard is a game changer. CIVHC worked very closely with us to develop a visualization tool that helps us easily identify and tell the story of how pharmacy costs are impacting people with chronic conditions. I am really impressed with the ability of this dashboard to help us drill down on the areas of importance to us – for example, Medicaid costs – which enables us to have informed conversations on opportunities for change.”

- Sharon O’Hara, Executive Director,  
Chronic Care Collaborative

Understand how prices for certain drugs have gone up for patients in recent years

Low High

Identify where prices are higher and lower across the state

.....

Isolate which health insurers have the lowest rates for high volume drugs...and more!
