Looking for data that can help you find opportunities to lower cost and improve health and health care?

Standard datasets from the CO APCD are available for organizations who have analytic capacity and need access to comprehensive health care claims data in order to achieve their strategic goals. CO APCD standard datasets are a great way to have information on hand that can inform new projects and innovations.

Health System Use Case

One large health system in Colorado is using the Premium Standard Dataset to augment their own internal data to provide the "full view" of Colorado quality, cost and utilization. The CO APCD dataset is being used to develop bundled care reimbursement programs, address opportunities in readmissions, improve the continuum of care, and conduct community needs assessments and partnership opportunities in the outpatient setting.

A health care transformation consultant who directly supports payers and providers is using a Standard Dataset to understand how practice referral patterns contribute to health care waste and how much that waste is impacting costs. By analyzing per member per month total cost of care over time for a specific provider group's attributed population, they aim to isolate areas of opportunities where providers could have referred patients to a more cost-effective, higher quality place of service or facility.

Health Data Consultant Use Case

Data Elements Included

	Level 1 Basic	Level 2 Provider Data Enhanced	Level 3 Provider Data Premium
Claim Line Detail	x	x	x
Member - Composite ID	x	x	x
Member - 3-digit Residence Zip Code	x	x	x
Provider - Composite ID	x	x	x
Provider - Individual NPI		x	x
Provider - Pharmacy ID		x	x
Provider - All details			x
